

Sample Lab Report

Abstract

Modern scientific papers typically begin with a short abstract summarizing the entire project. This sample lab report includes all the elements present in a modern scientific paper, organized in a fashion appropriate for introductory astronomy lab reports.

Introduction

This sample lab report illustrates a suitable form for writing a scientific paper. The introduction presents a basic statement of the problem to be solved. It may be to test a hypothesis, explore some phenomenon or test new experimental techniques. The present "hypothesis" is that it is possible to illustrate how to write a lab report. The report begins with a **Title** giving a succinct, one-line identification of the project, the **Author** or **Authors** actually responsible for the report and the author's **Affiliation**, which in this case will include the course and lab section. For Astronomy labs, each student must write his or her own report. The body of the report should include an **Introduction**, a description of the **Procedure** (or **Measurements** or **Observations**), an **Analysis** (or **Results**) section, a section describing the **Error Analysis** and a **Discussion** or **Conclusions** section. There may also be an **Acknowledgements** paragraph, mentioning people who may have provided data or other help for the project. In most scientific papers there will be a list of **References** that may have been used in the preparation of the report. Finally, for Astronomy lab reports, the original **Data** pages should be attached to the report.

Procedure

The body of the report should begin with a systematic discussion of the project. The equipment should be described, and each observational or experimental or computational step should be discussed. A table or figure summarizing the data may be appropriate. It may not be necessary to include all of the data in this section, but the essential data used in the analysis section should be described completely. Figures or sketches of the instrumental setup or other illustrations are likely to be helpful.

After reading the procedure section, the reader should have a clear idea of what was actually done in the project. The goal of this section is to justify that the hypothesis described in the introduction has really been tested.

Analysis

Usually there will be a computational section or perhaps a discussion that brings together the pieces of the project to derive the final results. The results may be partly in the form

[Writing for Impact: How to Craft Powerful Scientific Articles](#) Balasubramanian Thiagarajan, 2023-02-02 Current day researchers are at cross roads. The entire publishing culture and scenario has undergone a sea change. Author is now confronted with newer tools that aid their article generation and publication. The arrival of digital era has made a quantum difference to the scientific publication scenario. The sheer number of publications and the publishers have multiplied rather drastically. The present day author hence should have the following skill set in order to publish good scientific papers:

- 1. Adept at handling word processors
- 2. Comfortable with browser usage and search engine usage
- 3. Should be familiar with LATEX language and allied tools
- 4. Digital publishing brings with it a certain amount of automation and hence the user should be comfortable with the auto publishing process.

This book is intended for those aspiring scientific writers, whichever format of writing they choose to showcase their wares. Separate chapters have been included to hand hold the budding author throughout their writing journey. Some of the chapters that would be of immense use to this book have included:

- 1. Thesis writing
- 2. Dissertation writing
- 3. Scholarly writing
- 4. Preparing project reports for grants.

Chapters have been organised in such a way that each one of them can be read in isolation. Hope this book would be of help to budding authors and researchers.
