Explicit Memory English Edition:

On Autobiographical Memory Anita Kasabova, 2009-05-27 The aim of this book is to provide an account of autobiographical memory the memory of episodes in the subject's autobiography and to answer the following questions what happens when we remember something Why do we remember some things rather than others The main assumptions in this book are that autobiographical memory is an active structure of a representational nature and that autobiographical memory is a construct of the imagination enabled by a semantic principle the ground consequence relation Anita Kasabova reconstructs the epistemological accounts of memory by the Prague philosopher and mathematician Bernard Bolzano and the Prague physiologist Ewald Hering as well as the phenomenological accounts by Edmund Husserl and Roman Ingarden and discusses various accounts put forward within analytic philosophy She examines the trace theory and its relation to the phenomenology of autobiographical memory and the different temporal perspectives that characterize this form of memory Kasabova formulates a philosophical explication of how autobiographical memory works dealing with issues such as what are the defining features of autobiographical memory how is it structured and how does it function what is a recollection and what are the necessary and for the most part sufficient conditions for a recollection to occur Kasabova argues that such conditions are a sense of self and a sense of connectedness of the self that is semantic rather than causal the subject's sense of ownership of past experiences and the capacity of imagination for mental time travel and thinking about past episodes you have to be able to produce representations not bound to the current situation It is argued that access to the subject's personal past cannot occur otherwise than by construction in imagination In order to reproduce a past experience in the present imagination is necessary for representing a past episode as if it were present Other necessary conditions for autobiographical memory are time awareness a continuous temporal reference frame a successive temporal order and the capacity to refer back to previous positions in time Finally semantic relations of part whole and ground consequence are crucial for explaining autobiographical memory It is argued that the part whole relation is the principle of the memory trace and that the grounding relation co-ordinates the subject's perspective on past episodes in recollective statements Kasabova argues that autobiographical memory is basically semantic as it is grounded by and constructed through a sense making relation expressed by the explanatory conjunct because we recall certain experiences or actions rather than other because we are sensitive to the reasons for having experienced it The new book by Anita Kasabova fills a gap between traditional philosophical armchair speculations about memory and contemporary cognitive theories which have grown out of extensive experimental research The book's main idea that autobiographical memory is not a mere recollection but rather an active reconstruction of our past memories is not an entirely new one Anita Kasabova however provides a new take on this idea by revealing that the theories of Bolzano Hering and Husserl not only bear historical significance but properly reconstructed they might be viewed as an important contribution to the contemporary interdisciplinary studies of memory An appreciable

achievement of the book is the chosen conceptual framework it makes the idiosyncratic language of Bolzano and Husserl accessible to contemporary cognitive scientists as well as making the recent cognitive theories understandable for the traditional philosophical scholars Even if this were the only achievement of Anita Kasabova and it is not it would represent her monograph as a book of a great merit for a large community of memory scholars Assoc Prof Lilia Gurova Department of Cognitive Science and Psychology New Bulgarian University

Human Memory Johannes Engelkamp, Hubert D. Zimmer, 1994 Our memory of simple action phrases such as comb your hair improves by about 50% when we actually act out the phrase Extensive studies on this self performance effect which is not explained by any of the current theories of episodic memory led the authors of this book to develop a fascinating multi modal model of memory The central idea of this model is that human information processing is to a certain extent decentralized and that episodic memory performance depends not only on central information processing but also on which systems are actually involved in the encoding and retrieval of the material itself This book describes the practical evidence and theoretical background for this model which not only challenges current concepts in the psychology of memory but also has potentially very important implications about how people might best learn to remember information in our increasingly multi modal information age **McGill Working Papers in Linguistics**, 2007 *Memory Concepts*-1993 Per

Andersen, 1993 This overview of experimental and clinical memory problems covers aspects from the analysis of learning and memory types to molecular scientific studies of underlying causes Current theories on the biological basis for learning are examined in the light of experimental evidence **Canadian Journal of Experimental Psychology**, 2001 **Mind**, 1893
