## **Evidence Based Practice Across The Health Professions:**

*Evidence-Based Practice Across the Health Professions* Christopher Del Mar, Tammy Hoffmann, Sally Bennett, 2009-10-16

Inter professional education that begins in undergraduate or graduate entry programs has been accepted by universities as a proven method for fostering collaborative practice among health professionals yet there are few truly multidisciplinary books about evidence based practice that meet the needs of undergraduate and postgraduate students enrolled in inter professional courses. *Evidence based Practice across the Health Professions* is designed to meet this need. It provides the reader with an excellent foundation in the knowledge and skills necessary to perform and understand the implications of evidence based practice within a healthcare environment. It discusses the critical role of clinical reasoning and includes a range of practical strategies to facilitate shared decision making and effective communication with clients for improved client outcomes. Evidence based decision making is common to all professions and provides an ideal platform for multidisciplinary work. With this in mind to facilitate an understanding of how evidence may be integrated into clinical practice there are a number of chapters that contain worked examples from many different health professions that demonstrate appraisals of the methodological quality and interpretation of results for a number of different methodologies such as randomised controlled trials, diagnostic studies, cohort studies and qualitative research. Health professionals from a range of disciplines will benefit from familiarity with the intervention being evaluated, the context of the intervention and the outcome measures used. *Evidence based Practice across the Health Professions* is of direct relevance to all health profession students and practitioners engaged in client care and in making informed clinical decisions in order to achieve better client outcomes. Worked examples of a wide range of case scenarios and appraised papers, some are discipline specific and others are multidisciplinary, designed to be used by students from a wide range of health professions thus facilitating the student's ability to understand the needs of multi disciplinary health care teams in a real life setting. Includes a detailed chapter on implementing evidence into practice and other topics that are not typically addressed in other texts such as a chapter about how to communicate evidence to clients and another that discusses the role of clinical reasoning in evidence based practice. Summary points at the end of each chapter supported by an Evolve resource package that contains revision questions that utilize a range of question formats.
