IMPORTANT PRECAUTIONS

- Charge only nickel-cadmium or nickel-metal hydride rechargeable batteries. Damage may occur from other types of batteries.
- Do not use automatic type battery chargers to power the charger.
- Do not allow water, moisture or foreign objects into the charger.
- Do not cover the air intake holes on the charger. This will cause the charger to overheat.
- Do not charge batteries containing fewer than 4 cells.
- Always connect the power supply first.
- Do not use a cable longer than 30cm to connect the charger with the batteries.
- Do not leave the charger unattended while charging. **Disconnect the battery immediately if the charger becomes hot.** Allow the charger or battery to cool down before reconnecting.
- Keep out of reach of children.
- Do NOT discharge cells smaller than sub-C size cells.

Unlike most other chargers, the IntelliPeak Pulse Charger is capable of charging both nickel-cadmium (NiCd) and nickel-metal hydride (NiMH) battery chemistries, as identified by this symbol. Look exclusively for battery chargers with this symbol to handle both NiCd and NiMH charging needs.

IMPORTANT CARE AND HANDLING INSTRUCTIONS FOR NiMH BATTERIES

While similar in appearance to sub-C NiCd batteries, NiMH batteries have a different internal chemistry and require a different charging method.

It is important not to allow NiMH batteries to overheat while being charged. Heat can adversely affect the performance of NiMH batteries. When charging NiMH batteries with the IntelliPeak Pulse Charger, do not adjust the PEAK CHARGE AMPS adjustment knob above 3.0 amps. Charging at a higher amperage will heat up the batteries and could cause permanent damage. If overheating is observed, disconnect the battery from the charger immediately, and reduce the charge rate for future charging needs. Also, do not deep cycle NiMH batteries. Permanent damage could result. Store NiMH packs with some voltage remaining on the cells. Use a NiMH battery pack no more than three cycles per day, with a two to three hour break in-between for cooling. More frequent use is likely to overheat the pack.

DC INPUT POWER

If using a DC power supply or 12V DC battery for input power, connect the DC adapter (included) to the lead exiting the rear of the charger. Attach the red alligator clip to the positive (+) terminal on the power supply, and the black alligator clip to the negative (-) terminal. It's best to use a clean DC power source whose output is filtered to remove unwanted electrical noise. Disconnect the DC input adapter cord from the charger when not in use.

AC INPUT POWER

If using 110V AC for input power, connect the black AC plug to a regular 110V wall outlet. Do not connect the DC input leads to any power source simultaneously with AC input, as permanent damage to your charger may result.

FUSE PROTECTION

The IntelliPeak Pulse Charger is fuse protected from current overload. Only replace the glass fuse with one of the same rating (250V/32A) and size (5 x 20mm). **CAUTION:** Disconnect the charger from the AC power source and the lead battery from the charger before replacing the fuse.

OUTPUT LEAD

The output lead (included) has a standard style connector at one end, with the opposite wire ends stripped to a small portion of bare wire is showing. Insert the red, positive (+) wire into the red spring loaded terminal on the front of the charger. Install the black, negative (-) wire into the black spring loaded terminal. These terminals allow virtually any other charge leads to easily be connected to the charger if so desired. **CAUTION:** Make sure wire strands never make connection between the red and black terminals! Failure to do so could result in a short circuit condition, causing the fuse to blow or permanent damage to the charger and/or battery.

SLOW CHARGING

The IntelliPeak Pulse Charger offers a slow 100mA trickle charge rate for charging a new battery or topping off a previously charged battery. Connect the battery to the charge lead on the front of the charger. The green SLOW CHARGE LED should automatically begin to flash, indicating trickle charge is in progress. A 1500mAh battery should reach full charge in approximately 15 hours using this charge method.

PEAK CHARGING

This unit has a high-rate fast charge to recharge a partially discharged battery, with circuitry designed to monitor pack voltage and automatically terminate fast charge when full charge is reached. Select the desired charge rate using the PEAK CHARGE AMPS adjustment knob. Connect the battery to the charge lead on the front of the charger. The green SLOW CHARGE LED should automatically begin to flash, indicating trickle charge is in progress. Push the MODE SELECT button once to start peak charging. The red PEAK CHARGE LED should light, and the charger will keep one to confirm peak charge is in progress. When this LED begins to flash the battery is approaching peak charge. This should soon be followed by occasional flashing of the STATUS LED, where each flash represents instantaneous moments when actual battery voltage is starting to decline, thus indicating the battery has reached peak and the charger will soon return to slow charge automatically.

WARNING: Do not leave charger unattended during fast charge. If the battery or charger become hot at any time, disconnect the battery from the charger immediately! Failure to do so may cause permanent damage to the charger and battery, and may cause bodily harm. Reduce the charge rate for future charging needs.
