Throck Watson,2009-09-25 Biomedical Applications of Mass Spectrometry Edited by Clarence H Suelter and J Throck Watson This unusual text is not simply a compilation of mass spectrometric methods but provides instead insight into specific approaches mass spectroscopists use when applying the technique to a variety of biological problems Each chapter provides guidance in using the appropriate methods for isolating and purifying the compound class prior to mass spectrometric analysis Covered in depth are the mass spectrometry of carbohydrates peptide sequencing by mass spectrometry mass spectrometry of nucleic acid components and mass spectrometry in pharmacology This definitive look at a growing facet of the science is an essential reference for biochemists biological chemists bioanalytical chemists and students 1990 0 471 61303 7 396 pp

**Chimie macromoléculaire , Techniques in Molecular Biology** J.M. Walker,W. Gaastra,2012-12-06 The last few years have seen the rapid development of new methodology in the field of molecular biology New techniques have been regularly introduced and the sensitivity of older techniques greatly improved upon Developments in the field of genetic engineering in particular have contributed a wide range of new techniques The purpose of this book therefore is to introduce the reader to a selection of the more advanced analytical and preparative techniques which the

editors consider to be frequently used by research workers in the field of molecular biology In choosing techniques for this book we have obviously had to be selective and for the sake of brevity a knowledge of certain basic biochemical techniques and terminology has been assumed However since many areas of molecular biology are developing at a formidable rate and constantly generating new terminology a glossary of terms has been included The techniques chosen for this book are essentially based on those used in a series of workshops on techniques in molecular biology that have been held at The Hatfield Polytechnic in recent years In choosing these chapters we have taken into account many useful suggestions and observations made by participants at these workshops Each chapter aims to describe both the theory and relevant practical details for a given technique and to identify both the potential and limitations of the technique Each chapter is written by authors who regularly use the technique in their own laboratories

*Macromolecular Chemistry* A D Jenkins, John F Kennedy, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume

*Techniques in Protein Modification* Roger L. Lundblad, 1994-11-17 This exciting laboratory support book encompasses the encyclopedic coverage of the most frequently used methods for the site specific chemical modification of proteins In a concise manner it presents methods for the characterization of modified proteins including amino acid analysis protein sequence analysis chemical cleavage of protein chains chromatographic separation of peptides It also discusses various approaches to the determination of solution protein concentration It includes a complete literature survey of the various reagents a list of the most commonly used reagents with their physical and chemical properties and a list of preferred reagent suppliers

*Guide to Techniques in Glycobiology* William J. Lennarz, Gerald W. Hart, 1994-01-03 The critically acclaimed laboratory standard Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike The series contains much material still relevant today truly an essential publication for researchers in all

fields of life sciences Key Features Detailed procedures newly written for this volume Extensive practical information Rationale and strategies for carbohydrate chain analysis Among the topics covered Release of Oligosaccharides from Glycoproteins by Hydrazinolysis Mass Spectrometry of Carbohydrate Containing Biopolymers High resolution Polyacrylamide Gel Electrophoresis of Fluorophore Labeled Reducing Saccharides Capillary Electrophoresis of Oligosaccharides Synthesis and Uses of Azido Substituted Nucleoside Diphosphate Sugar Photoaffinity Analogs Structural Analysis of Glycosylphosphatidylinositol Anchors Identification of Polysialic Acids in Glycoconjugates **Chemical Reagents for Protein Modification** Roger L. Lundblad, 2020-03-11 First published in 1991 Chemical Reagents for Protein Modification 2nd Edition provides a unique combination of theoretical and practical considerations for the use of chemical reagents for site specific modification of proteins The book is divided into three sections with the first section describing general techniques including information on the organic chemistry of the various modification reactions the separation and characterization of site specific modified proteins including applications to proteins separated by electrophoresis followed by blotting the specific chemical cleavage of peptide bonds in proteins the separation of peptides by high performance liquid chromatography and electrophoresis and the use of chemical reagents to assess conformational change in proteins The second section provides an encyclopedic description of reagents and reactions for the site specific modification of individual amino acid residues in proteins The final section presents descriptions of the use of chemical reagents to label biologically significant sites in proteins including enzyme active sites and the use of covalent cross linking to measure protein protein interactions Particular emphasis is placed on the use of photoaffinity reagents The book will be an extremely useful research tool for all investigators interested in the solution chemistry of proteins **Handbook of Protein Sequence Analysis** L. R. Croft, 1980

**Proteins** James J. L'Italien, 2012-12-06 This volume surveys the current status of many of the important methods and approaches which are central to the study of protein structure and function Many of the articles in this volume are written to emphasize the general utility of the method or approach which is at its core and to provide sufficient literature references to enable the reader to adapt the method or approach to other applications It is hoped that this volume will provide a source from which newcomers as well as experienced scientists may become more familiar with recent developments and future trends in some of the important areas of protein research The articles which comprise this book are selected proceedings from the Symposium of American Protein Chemists which was held in San Diego California September 30 to October 3 1985 The goal of the organizers of this first symposium was to provide a forum for discussion and interaction among scientists whose interests span the broad spectrum of protein structure and function research The concept and timing of the symposium well received as evidenced by the approximately 500 delegates to the symposium The inaugural meeting was marked by a strong scientific program with over 140 papers presented in either a lecture or poster format
