IA-32 Intel Architecture Optimization Reference Manual Intel Corporation,2005 *Hardware Acceleration of Computational Holography* Tomoyoshi Shimobaba,Tomoyoshi Ito,2023-07-17 This book explains the hardware implementation of computational holography and hardware acceleration techniques along with a number of concrete example source codes that enable fast computation Computational holography includes computer based holographic technologies such as computer generated hologram and digital holography for which acceleration of wave optics computation is highly desirable This book describes hardware implementations on CPUs Central Processing Units GPUs Graphics Processing Units and FPGAs Field Programmable Gate Arrays This book is intended for readers involved in holography as well as anyone interested in hardware acceleration

Tools for High Performance Computing 2015 Andreas Knüpfer,Tobias Hilbrich,Christoph Niethammer,José Gracia,Wolfgang E. Nagel,Michael M. Resch,2016-07-27 High Performance Computing HPC remains a driver that offers huge potentials and benefits for science and society However a profound understanding of the computational matters and specialized software is needed to arrive at effective and efficient simulations Dedicated software tools are important parts of the HPC software landscape and support application developers Even though a tool is by definition not a part of an application but rather a supplemental piece of software it can make a fundamental difference during the development of an application Such tools aid application developers in the context of debugging performance analysis and code optimization and therefore make a major contribution to the development of robust and efficient parallel software This book introduces a selection of the tools presented and discussed at the 9th International Parallel Tools Workshop held in Dresden Germany September 2 3 2015 which offered an established forum for discussing the latest advances in parallel tools

Computer Organization, Design, and Architecture Sajjan G. Shiva,2025-05-30 This unique and classroom proven text provides a hands on introduction to the design of computer systems It depicts step by step the design and programming of a simple but complete hypothetical computer followed by detailed architectural features of existing computer systems as enhancements to the structure of the simple computer This treatment integrates the four categories of digital systems architecture logic design computer organization computer hardware and computer system architecture This edition incorporates updates to reflect contemporary organizations and devices including graphics processing units GPUs quantum computing and the latest supercomputer systems It also includes a description of the two popular Instruction Set Architectures ARM and RISC V The book is suitable for a one or two semester undergraduate or beginning graduate course in computer science and computer engineering its previous editions have been adopted by 120 universities around the world The book covers the topics suggested by the recent IEEE ACM curriculum for computer architecture and organization

Real-time Embedded Components and Systems Sam Siewert,2007

Due to the rapidly

expanding market for digital media services and systems there is a growing interest in real time systems Real Time Embedded Systems and Components is a much needed resource addressing this field for practicing engineers and students particularly engineers moving from best effort applications to hard or soft real time applications The book is written to teach practicing engineers how to apply real time theory to the design of embedded components and systems in order to successfully build a real time embedded system It is also intended to provide a balance of fundamental theory review of industry practice and hands on experience for undergraduate seniors or first year grad students preparing for a career in the real time embedded system industries Throughout the book you ll explore hard real time theory and soft real time concepts real time scheduling debugging components high availability and high reliability design system lifecycles and the processes for hardware firmware and software development for systems built from components And you ll find a balance of theory practice and applications to help you learn the fundamental concepts needed to build your own real time embedded system
