Preventing Hospital Infections Sanjay Saint MD, MPH, Sarah Krein PhD, RN, Robert W. Stock, 2014-10-01

Nearly 2 million Americans develop a healthcare associated infection each year and some 100 000 of them die as a result. Such infections are highly preventable particularly through the adoption and implementation of evidence based methods for reducing patient infection at the point of care. In cases where hospitals fall short of their goals for improving infection prevention their failures are often rooted in a low rate of staff adherence to the new prevention policies. In easy to read, user friendly language, Preventing Hospital Infections leads readers through a step by step description of a quality improvement intervention as it might unfold in a model hospital, pinpointing the likely obstacles and offering practical strategies for how to overcome them. The text draws on the extensive personal clinical experience of the authors, including examples, anecdotes and down to earth practical guidance. Whereas most books focus on the technical aspects of healthcare associated infections, this book offers the first manual for effecting real practical change. Whether resistance comes from physicians who distrust change, nurses who want to protect their turf or infection preventionists who avoid the wards, Preventing Hospital Infections offers an innovative and accessible approach that focuses on navigating the human element in a hospital quality improvement initiative.

Junior Mathematical Dominoes Tracey Macdonald, 2021-07-02

This is a

collection of photocopiable masters for Domino games for ages 7-11 on a variety of core topics. All the dominoes should form a continuous loop when each question is matched to its correct answer. This means that the students can self-assess their work to some extent, thus reducing workload for the teacher. They are ideal for revision and reinforcement. The games have been used to start lessons, end lessons on a bit of fun as a main activity and for end of term fun. They can either be prepared in advance, kept ready in the cupboard or cut out by students before trying to loop them. The students can even be involved in making their own sets which they get to use again, share with other classes or display on the wall.

SIMMS Integrated Mathematics, 2003 SIMMS IM curriculum is designed to replace all secondary mathematics courses with the possible exception of advanced placement courses. Each level includes work in algebra, geometry, probability, statistics, data analysis and discrete mathematics. Other topics such as trigonometry, matrices, conics, vectors, logic, logarithms and parametric equations are included at appropriate levels. Less traditional topics such as graph theory, game theory and chaos theory are also included in the program.
