Advanced AI Methods for Plant Disease and Pest Recognition Jucheng Yang, Yalin Wu, Alvaro Fuentes, Sook Yoon, Tonghai Liu, 2024-06-06 Plant diseases and pests cause significant losses to farmers and threaten food security worldwide. Monitoring the growing conditions of crops and detecting plant diseases is critical for sustainable agriculture. Traditionally crop inspection has been carried out by people with expert knowledge in the field. However, regarding any activity carried out by humans, this activity is prone to errors leading to possible incorrect decisions. Innovation is therefore an essential part of modern agriculture. In this context, deep learning has played a key role in solving complicated applications with increasing accuracy over time, and recent interest in this type of technology has prompted its potential application to address complex problems in agriculture such as plant disease and pest recognition. Although substantial progress has been made in the area, several challenges still remain, especially those that limit systems to operate in real world scenarios. [A.I.
