Martin, 2011 Our lives are a search for sustenance What work will we do in order to feed ourselves And who will love us Patrick begins mired in gloom rejected by his girlfriend and unsure of his occupation But an encounter with an old Chinese man gives him a message of hope his fate is his to create if he is willing to let go of things as they are So Patrick begins again elsewhere seeking work that is worthwhile in a support service for unemployed youth He finds that the simple search for sustenance can lead into vexing terrain How will he relate to the sadness anger apathy and disillusionment of the young people How will he respond to the sexuality of a co worker And how will he deal with the people on the management committee the self serving the brutal and the inept The gift the old man gave him the I Ching stands by him as he strives to bring peace and purpose to the service Amidst his endeavour to impose a direction on things Patrick has his eyes open for a woman who will love him and two women appear a mother and daughter They are all caught up as primitive old myths play out at a bachelors and spinsters ball and new myths are created

Coarse-to-Fine Natural Language Processing Slav Petrov, 2011-11-03 The impact of computer systems that can understand natural language will be tremendous To develop this capability we need to be able to automatically and efficiently analyze large amounts of text Manually devised rules are not sufficient to provide coverage to handle the complex structure of natural language necessitating systems that can automatically learn from examples To handle the flexibility of natural language it has become standard practice to use statistical models which assign probabilities for example to the different meanings of a word or the plausibility of grammatical constructions This book develops a general coarse to fine framework for learning and inference in large statistical models for natural language processing Coarse to fine approaches exploit a sequence of models which introduce complexity gradually At the top of the sequence is a trivial model in which learning and inference are both cheap Each

subsequent model refines the previous one until a final full complexity model is reached Applications of this framework to syntactic parsing speech recognition and machine translation are presented demonstrating the effectiveness of the approach in terms of accuracy and speed The book is intended for students and researchers interested in statistical approaches to Natural Language Processing Slav's work Coarse to Fine Natural Language Processing represents a major advance in the area of syntactic parsing and a great advertisement for the superiority of the machine learning approach Eugene Charniak Brown University
