

# How to wire a car stereo at home (power + speaker wiring)

Provided by SoundCertified.com

## Example 1

You can connect the ACC and BATT +12V wires from a car stereo to the positive 12V supply if turning off power at the supply. Connect the stereo's ground wire to the negative (-) supply wire or terminal.

Standard car stereo power wiring colors:

- RED:** "ACC", turns radio on with +12V
- BLK:** "GND", ground/negative wire
- YEL:** "BATT", radio memory & main +12V power.
- BLU:** Remote-on output for amp (not used here)

\*Car stereo wiring *typically* uses standard wire colors. However, some brands do not so always verify before connecting wiring.

## Example 2

You can jumper and add a small switch if you'd like to manually turn the stereo on & off. The radio draws a tiny amount (memory backup power) when turned off even if the power supply is on, so you can leave the supply plugged in.

## 3

**Speaker wiring:** For car stereos you can connect 4 ohm or 8 ohm speakers.

Car stereo wiring *typically* uses standard wire colors for speaker connections:

White = Front left +, White/black = front left -  
Gray = Front right +, Gray/black = front right -  
Green = Left rear +, Green/black = left rear -  
Violet = Right rear +, Violet/black = right rear -

**You CAN connect 8 ohm home speakers to a car stereo.** Since 8 ohm speakers have twice the resistance (*impedance*) of 4 ohm, they'll have 1/2 the power of 4 ohm speakers at the full volume setting.

(They're fine for casual listening but for high volume you'll need more power)
