### **Integrating Social and Behavioral Sciences Within the Weather Enterprise**

National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Division on Earth and Life Studies, Board on Human-Systems Integration, Board on Environmental Change and Society, Board on Atmospheric Sciences and Climate, Committee on Advancing Social and Behavioral Science Research and Application Within the Weather Enterprise, 2018-02-05 Our ability to observe and forecast severe weather events has improved markedly over the past few decades Forecasts of snow and ice storms hurricanes and storm surge extreme heat and other severe weather events are made with greater accuracy geographic specificity and lead time to allow people and communities to take appropriate protective measures Yet hazardous weather continues to cause loss of life and result in other preventable social costs There is growing recognition that a host of social and behavioral factors affect how we prepare for observe predict respond to and are impacted by weather hazards For example an individual s response to a severe weather event may depend on their understanding of the forecast prior experience with severe weather concerns about their other family members or property their capacity to take the recommended protective actions and numerous other factors Indeed it is these factors that can determine whether or not a potential hazard becomes an actual disaster Thus it is essential to bring to bear expertise in the social and behavioral sciences SBS including disciplines such as anthropology communication demography economics geography political science psychology and sociology to understand how people s knowledge experiences perceptions and attitudes shape their responses to weather risks and to understand how human cognitive and social dynamics affect the forecast process itself Integrating Social and Behavioral Sciences Within the Weather Enterprise explores and provides guidance on the challenges of integrating social and behavioral sciences within the weather enterprise It assesses current SBS activities describes the potential value of improved integration of SBS and barriers that impede this integration develops a research agenda and identifies infrastructural and institutional arrangements for successfully pursuing SBS weather research and the transfer of relevant findings to operational settings

**Trust and Information**

**During Hurricane Ike** Robert Prestley, 2017 Hurricane Ike devastated the Galveston Texas region in September 2008 The storm was well forecast and potential damage to the Galveston area was made clear through certain death warnings but many people in mandatory evacuation zones decided not to evacuate anyway This study looks at how information sources and trust affected the evacuation process during Hurricane Ike through analysis of a survey of 4 000 Houston area residents that was administered by the Houston Chronicle directly after Ike made landfall Information sources considered include the National Weather Service broadcast and print media state and local officials and family and friends The study revealed that

the National Hurricane Center and National Weather Service were the most trusted sources while state officials and national network news were the least trusted sources. Additionally, regret affected trust in information sources but evacuation difficulty and damage to neighborhood did not. The survey also showed that participants trusted the sources they used during the storm more than sources they did not use. *Franchise Times*, 2008     **Annual Report** University of Texas at Austin. Bureau of Economic Geology, 2008     **Naval History**, 2012     **New Mexico Labor Market Report**, 2008     *Hurricane Ike Impact Report*, 2008     **The Waterways Journal**, 2008     **Standard & Poor's Stock Reports**, 2008-11     Lessons from Hurricane Ike Philip B. Bedient, 2012-05-16. If Hurricane Ike had made landfall just fifty miles down the Texas coast the devastation and death caused by what was already one of the most destructive hurricanes in US history would have quadrupled. Ike made everyone realize just how exposed and vulnerable the Houston/Galveston area is in the face of a major storm. What is done to address this vulnerability will shape the economic, social, and environmental landscape of the region for decades to come. In Lessons from Hurricane Ike Philip Bedient and the research team at the Severe Storm Prediction Education and Evacuation from Disasters (SSPEED) Center at Rice University provide an overview of some of the research being done in the Houston/Galveston region in the aftermath of Hurricane Ike. The center was formed shortly after Hurricanes Katrina and Rita in 2005. Its research examines everything from surge and inland flooding to bridge infrastructure. Lessons from Hurricane Ike gathers the work of some of the premier researchers in the fields of hurricane prediction and impact, summarizing it in accessible language accompanied by abundant illustrations, not just graphs and charts but dramatic photos and informative maps. Orienting readers to the history and basic meteorology of severe storms along the coast, the book then revisits the impact of Hurricane Ike and discusses what scientists and engineers are studying as they look at flooding, storm surges, communications, emergency response, evacuation planning, transportation issues, coastal resiliency, and the future sustainability of the nation's fourth largest metropolitan area.     Government Reports Announcements & Index, 1994-07
