**Elementary Principles of Chemical Processes** Richard M. Felder, Ronald W. Rousseau, J.D. Beasley, 1986 Gain a better understanding of chemical processes. This text will provide you with a realistic informative introduction to chemical processes. This 3rd edition has been completely revised to provide you with increased clarity including Hundreds of new and revised problems and new case studies cover a broader spectrum of chemical engineering applications. Guidance for solving problems that require spread sheeting and equation solving software. A CD ROM that provides an active learning environment. With this software students respond to questions and receive immediate feedback explore variations in process parameters and see the effect of their changes on process operations and more. 2005 Edition icons in the text margin let you know when it's most helpful to use the ICPP CD ROM and the Student Workbook. **Elementary Principles of Chemical Processes** Richard M. Felder, Ronald W. Rousseau, 1986 This introduction to chemical processes lays the foundation for a chemical engineering curriculum. It shows beginning students how to apply engineering techniques to the solution of process related problems by breaking each problem down into individual component parts defining the relationships between them and reuniting them in a single solution. Providing detailed practical examples with every problem and self test questions at the end of each chapter it uses predominantly SI units in its coverage of theoretical components of an engineering calculation processes and process variables fundamentals of material balances single and multiphase systems energy and energy balances balances on nonreactive processes and more.

## **Chemical Engineering Education** , 2001 **Maple V: Mathematics and its Applications** Robert J.

Lopez, 2012-12-06 The Maple Summer Workshop and Symposium MSWS 94 reflects the growing community of Maple users around the world. This volume contains the contributed papers. A careful inspection of author affiliations will reveal that they come from North America Europe and Australia. In fact fifteen come from the United States two from Canada one from Australia and nine come from Europe. Of European papers two are from Germany two are from the Netherlands two are from Spain and one each is from Switzerland Denmark and the United Kingdom. More important than the geographical diversity is the intellectual range of the contributions. We begin to see in this collection of works papers in which Maple is used in an

increasingly flexible way For example there is an application in computer science that uses Maple as a tool to create a new utility There is an application in abstract algebra where Maple has been used to create new functionalities for computing in a rational function field There are applications to geometrical optics digital signal processing and experimental design

Material and energy balances are fundamental to many engineering disciplines and have a major role in decisions related to sustainable development. This text, which covers the substance of corresponding undergraduate courses, presents the balance concepts and calculations in a format accessible to students, engineering professionals, and others who are concerned with the material and energy future of our society. Following a review of the basic science and economics, the text focuses on material and energy accounting in batch and continuous operations, with emphasis on generic process units, flow sheets, stream tables, and spreadsheet calculations. There is a unified approach to reactive and non-reactive energy balance calculations, plus chapters dedicated to the general balance equation and simultaneous material and energy balances. Seventy worked examples show the elements of process balances and connect them with the material and energy concerns of the 21st century.

**Numerical Calculations for Process Engineering Using Excel VBA** Chi M. Phan, 2023-12-01. **Numerical Calculations for Process Engineering Using Excel VBA** provides numerical treatment of process engineering problems with VBA programming and Excel spreadsheets. The problems are solving material and energy balances, optimising reactors and modelling multiple factor processes. The book includes both basic and advanced codes for numerical calculations. The basic methods are presented in different variations, tailored to particular applications. Some macros are combined with each other to solve engineering problems. Examples include combining the bisection method and binary search to optimise an implicit correlation, combining golden section search with Euler's method to optimise a reactor, and combining bisection code and Euler's method to solve steady state heat distribution. The text also includes nonconventional examples such as harmony search and network analysis. The examples include solutions to common engineering problems such as adiabatic flame temperature, plug flow reactor conversion, batch reactor heat diffusion, and pinch analysis of heat exchanger networks. The VBA code is presented with mathematical equations and flowcharts, enabling the audience to adopt the solutions to different problems. The book contains many demonstrations of numerical techniques to guide users. It also includes useful summaries of VBA commands, functions, and Excel predefined functions accessible in VBA. While the book is developed primarily for undergraduate students, the book is a helpful resource for postgraduate students and engineers.
