The Vortex Frank Uekötter,2024-04-18

Environmental challenges are defining the twenty first century To fully understand ongoing debates about our current crises climate change loss of biological diversity pollution extinction resource woes means revisiting their origins in all their complexity With this ambitious highly original contribution to the environmental history of global modernity Frank Uekötter considers the many ways humans have had an impact on their physical environment throughout history Ours is not a one way trajectory to sudden collapse he argues but rather death by a thousand cuts The many paths we've forged to arrive in our current predicament from agriculture to industry to infrastructure must be considered collectively if we are to stay afloat in what Uekötter describes as a vortex a powerful metaphor for the flow of history capturing the momentum and the many crosscurrents that swept people and environments along His book invites us to look at environmental challenges from multiple perspectives including all the twists and turns that have helped to create the mess we find ourselves in Uekötter has written a world history for an age where things are falling apart where we know what lies ahead and are equipped with the right tools technological and otherwise and plenty of experience to deal with environmental challenges but somehow fail to get our affairs in order

Systems Analysis Approach for Complex Global Challenges Priscilla Mensah,David Katerere,Sepo Hachigonta,Andreas Roodt,2018-04-09 This book which contains a collection of review articles as well as focus on evidence

based policy making will serve as a valuable resource not just for all postgraduate students conducting research using systems analysis thinking but also for policy makers. To our knowledge a book of this nature which also has a strong African focus is currently not available. The book examines environmental and socio economic risks with the aim of providing an analytical foundation for the management and governance of natural resources disasters addressing climate change and easing the technological and ecological transitions to sustainability. It provides scientific and strategic analysis to better understand the dynamics of future energy transitions their main driving forces enabling factors barriers as well as their consequences for the social economic and environmental dimensions of human wellbeing. Science based policy advice is achieved through an integrated assessment and modeling of how to simultaneously address the major energy policy challenges in the areas of environment climate change and air pollution energy poverty or access to affordable and clean energy for the poor energy security and reliability. It also aims to improve our understanding of ecosystems and their management in today's changing world in particular the current state of ecosystems and their ecological thresholds and buffering capacities. It provides support for policy makers in developing rational realistic and science based regional national and global strategies for the production of fuel food and fibre that sustain ecosystem services and safeguard food security. Finally it addresses the human development dimension of global change based on comprehensive studies on the changing size and composition of human populations around the world by analyzing both their impacts and the differential vulnerabilities by age gender and level of education.

Farm-Level Modelling Shailesh Shrestha, Andrew Barnes, Bouda Vosough Ahmadi, 2016-09-28

Agriculture is the product of a complex mixture of behavioural biophysical and market drivers Understanding how these factors interact to produce crops and livestock for food has been the focus of economic investigation for many years The advent of optimisation algorithms and the exponential growth in computing technology has allowed significant growth in mathematical modelling of the dynamics of agricultural systems The complexity of approaches has grown in parallel with the availability of data at increasingly finer resolutions Farm level models have been widely used in agricultural economic studies to understand how farmers and land owners respond to market and policy levers This book provides an in depth description of different methodologies and techniques currently used in farm level modelling While giving an overview of the theoretical grounding behind the models an applied approach is also used Case studies range from the application of modelling to policy reforms and the subsequent impacts on rural communities and food supply This book also provides descriptions of the use of farm level models in much wider fields such as aggregation and linking with sectoral models Its purpose is to show the reader the methods that have been employed to inform decision makers about how to improve the economic social and environmental goals required to achieve the aims of multidimensional policy

Cultural Commons Enrico Eraldo Bertacchini, 2012-01-01 The concept of the commons as a shared resource capable of yielding collective benefits to people is a well established one in the social sciences but its extension to jointly owned cultural resources is relatively new This pioneering book explores the idea of a cultural commons as it can be applied in a wide range of areas including landscapes art and design gastronomy heritage the performing arts and the online world Although the book s chapters are written mainly from the perspective of cultural economics the scope of the volume is truly interdisciplinary the book is more than just a comprehensive introduction to the topic It is also a source of original ideas that will act as a stimulus to further research in the field David Throsby Macquarie University Australia This compelling book offers a fresh and novel approach to study cultural and artistic expression from the perspective of the commons It demonstrates how identifying cultures as shared resources is useful in eliciting the main factors and social dilemmas affecting the production and evolution of cultural expression Adopting the unifying perspective of the cultural commons the chapters provide in depth analysis of a wide range of cultural resources including traditional cultural expression heritage gastronomy and cultural content in virtual worlds Taking an interdisciplinary perspective and gathering contributions from economic sociological and legal fields this timely book proposes a new and complementary research agenda Scholars and

postgraduate students of cultural economics cultural studies and sociology of culture will find this authoritative and essential book invaluable *Cross Border Security in the Southern African Region* Inocent Moyo,2024-07-29 This book provides a sophisticated analysis of cross border challenges and problems in the southern African region It advances explanations that transcend the state centric narrative that has nationalised cross border security It provides insights from non state actors such as informal cross border traders ICBTs informal cross border transporters undocumented migrants and cross border communities It argues that security needs to be understood beyond a state centric paradigm by focusing on the political economic environmental and societal threats at macro meso and micro levels The book suggests that at the core of cross border security challenges in the Southern African region is a post colonial governmentality This drives the nationalisation of cross border security as though it is the only security leading to nation states in turn depoliticising and invisibilising the security and livelihoods of ordinary people even when nation states claim to be protecting the same The book will be a useful resource for students scholars and researchers of African Studies Border Studies Human Geography Migration Studies Development Studies International Studies International Relations Political Science and Security Studies
