web 10 2 setting out curves this is the process of establishing the centre line of the curve on the ground by means of pegs at 10 m to 30 m intervals in order to do this the tangent and intersection points must first be fixed in the ground in their correct positions consider figure 10 3

web the point where the two curves connect namely the point at which the pt of the first curve equals the pc of the second curve is referred to as the point of compound curvature pcc since their tangent lengths vary compound curves fit the topography much better than simple curves
