Computer Exercises for Linear Algebra a project manual using MATLAB may be packaged free with the text *Continuous Functions of Vector Variables* Alberto Guzman, 2012-12-06 This text is appropriate for a one semester course in what is usually called advanced calculus of several variables The focus is on expanding the concept of continuity specifically we establish theorems related to extreme and intermediate values generalizing the important results regarding continuous functions of one real variable We begin by considering the function $f(x, y)$ of multiple variables as a function of the single vector variable (x, y) It turns out that most of the treatment does not need to be limited to the finite dimensional spaces R^n so we will often place ourselves in an arbitrary vector space equipped with the right tools of measurement We then proceed much as one does with functions on R First we give an algebraic and metric structure to the set of vectors We then define limits leading to the concept of continuity and to properties of continuous functions Finally we enlarge upon some topological concepts that surface along the way A thorough understanding of single variable calculus is a fundamental requirement The student should be familiar with the axioms of the real number system and be able to use them to develop elementary calculus that is to define continuous function derivative and integral and to prove their most important elementary properties Familiarity with these properties is a must To help the reader we provide references for the needed theorems
