

When you enter code at the cursor and press ENTER, JavaScript should run, or *execute*, your code and display the result (if any) on the next line. For example, type this into the console:

3 + 4;

Now press ENTER. JavaScript should output the answer (7) to this simple bit of addition on the following line:

3 + 4;

7

Well, that's easy enough. But isn't JavaScript more than a glorified calculator? Let's try something else.

THE STRUCTURE OF A JAVASCRIPT PROGRAM

Let's create something a bit sillier—a JavaScript program to print a series of cat faces that look like this:

=^_~^=

Unlike our addition program, this JavaScript program will take up multiple lines. To type the program into the console, you'll have to add new lines by pressing SHIFT-ENTER at the end of each line. (If you just press ENTER, Chrome will try to execute what you've written, and the program won't work as expected. I warned you that computers were dumb!)

Type this into your browser console:

```
// Draw as many cats as you want!
var drawCats = function (howManyTimes) {
  for (var i = 0; i < howManyTimes; i++) {
    console.log(i + " =^_~^=");
  }
};

drawCats(10); // You can put any number here instead of 10.
```
