Introduction to Applied Optimization Urmila Diwekar, 2008-12-03 Optimization has pervaded all spheres of human endeavor Although optimization has been practiced in some form or other from the early prehistoric era this area has seen progressive growth during the last few decades Modern society lives not only in an environment of intense competition but is also constrained to plan its growth in a sustainable manner with due concern for conservation of resources Thus it has become imperative to plan design operate and manage resources and assets in an optimal manner Early approaches have been to optimize individual activities in a standalone manner however the current trend is towards an integrated approach integrating thesis and design design and control production planning scheduling and control The functioning of a system may be governed by multiple performance objectives Optimization of such systems will call for special strategies for handling the multiple objectives to provide

solutions closer to the systems requirement Uncertainty and variability are two issues which render optimal decision making difficult Optimization under uncertainty would become increasingly important if one is to get the best out of a system plagued by uncertain components These issues have thrown up a large number of challenging optimization problems which need to be resolved with a set of existing and newly evolving optimization tools Optimization theory had evolved initially to provide generic solutions to optimization problems in linear nonlinear unconstrained and constrained domains These optimization problems were often called mathematical programming problems with two distinctive classifications namely linear and nonlinear programming problems Books in Print ,1994 **Scientific and Technical Books and Serials in Print** ,1989

Recent Developments in Metaheuristics Lionel Amodeo, El-Ghazali Talbi, Farouk Yalaoui, 2017-09-18 This book highlights state of the art developments in metaheuristics research It examines all aspects of metaheuristic research including new algorithmic developments applications new research challenges theoretical developments implementation issues in depth experimental studies The book is divided into two sections Part I is focused on new optimization and modeling techniques based on metaheuristics The chapters in this section cover topics from multi objective problems with fuzzy data with triangular valued objective functions to hyper heuristics optimization methodology designing genetic algorithms and also the cuckoo search algorithm The techniques described help to enhance the usability and increase the potential of metaheuristic algorithms Part II showcases advanced metaheuristic approaches to solve real life applications issues This includes an examination of scheduling the vehicle routing problem multimedia sensor network supplier selection bin packing objects tracking and radio frequency identification In the fields covered in the chapters are of high impact applications of metaheuristics The chapters offer innovative applications of metaheuristics that have a potential of widening research frontiers Altogether this book offers a comprehensive look at how researchers are currently using metaheuristics in different domains of design and application **Books and Pamphlets, Including Serials and Contributions to Periodicals**
