*Swaziland Operational Plan Report Fy 2013* United States United States Department of State,2014-11-12 Swaziland is a landlocked kingdom at the epicenter of the global HIV AIDS pandemic struggling to mitigate the world s highest prevalence rates of HIV and TB Economically Swaziland is closely tied to South Africa from which it receives 90 percent of its imports and a large proportion of its public sector financing through the Southern African Customs Union SACU Compounding the economic situation and exacerbating the strains on the health and social systems was a precipitous fall in revenue resulting from two thirds cut of SACU customs receipts in 2009 More than half of the population is under 20 and nearly half of the youth are at extremely high risk of HIV The 2010 Multiple Indicator Cluster Survey MICS reported that 45 1% of children and youth fit the definition of orphaned or vulnerable Traditional family structures have all but collapsed with only 22 percent of children raised in two parent households Gender based inequalities violence poverty and income disparities persist in the country and create significant barriers to effective HIV prevention interventions and the up take of care and treatment services Economic growth and development have been deeply impacted by the health crisis which literally threatens the future of the kingdom The 2010 MICS reported high rates of malnutrition with 40 9 percent of children experiencing moderate to severe stunting Furthermore anecdotal reports show that food insecurity is one of the main reasons that eligible individuals will not initiate treatment they fear not having food to take with ARVs The Swaziland HIV Incidence Measurement Survey SHIMS published in late 2012 provides the best data available to date on the epidemic SHIMS identified a national HIV prevalence of 31 percent among adults 18 49 years of age A reanalysis of the 2007

Demographic Health Survey data determined prevalence of 31 percent in adults 18-49 indicating that the HIV prevalence in Swaziland has stabilized in the last five years. Adult incidence is high at 2.4 percent with a significantly higher incidence for women of 3.1 percent and 1.7 percent for men. *Zambia Operational Plan Report Fy 2013* United States Department of State, 2014-11-12. The recent 2012 UNAIDS World AIDS Day Report showed significant improvements in HIV and AIDS related results globally. In general new HIV infections declined among children there were fewer AIDS related deaths and there were increased investments in the response to HIV and AIDS. Zambia like many countries has recorded significant improvements in all three key areas. According to the report between 2001 and 2011 Zambia reduced new HIV infections by 58% while the country also cut AIDS related deaths by more than 50%. The 2007 Zambia Demographic and Health Survey 2007 ZDHS measured adult HIV prevalence at 14.3%. With the population currently standing at 13.1 million people with 61% in rural areas and 39% in urban areas Zambia still has one of the world's most devastating HIV and AIDS epidemics with more than one in seven adults living with HIV. Infection rates are twice as high in urban as in rural areas while life expectancy is estimated at 49 years in what is still a generalized epidemic. UNAIDS Report on the Global AIDS Epidemic 2010. The HIV epidemic is geographically diverse with provincial prevalence levels ranging from 6.8% to 20.8%. The Northern and Northwestern provinces have the lowest prevalence just below 7%. Both provinces are predominantly rural with low population density and high levels of poverty. In contrast Lusaka Central and Copperbelt Provinces are more densely populated with large urban areas and have prevalence levels of 17% and higher. The most recent UNAIDS Report on the Global AIDS Epidemic 2012 UNAIDS estimated Zambia's HIV prevalence among 15-49 year olds to have declined to 12.5%. The country is awaiting the results of the newly started DHS that will enable an update to the most recent HIV and AIDS statistics. The six key drivers of the HIV and AIDS epidemic in Zambia are 1. high rates of multiple concurrent partnerships, 2. low and inconsistent condom use, 3. low rates of voluntary medical male circumcision (VMMC), 4. population mobility, 5. vulnerable groups with high risk behaviors, and 6. mother to child transmission (MTCT). In addition other factors such as gender inequality, disparity, socio cultural practices and stigma interact with these drivers to sustain high levels of risk and vulnerability. *Botswana Operational Plan Report Fy 2013* United States Department of State, 2014-11-12. The U.S. Botswana health partnership remains strong and effective. HIV associated mortality has been reduced by more than half since treatment became available and the rate of new infections has declined. Botswana's HIV treatment and Prevention of Mother to Child Transmission (PMTCT) programs are models for their coverage and quality of services. The rate of mother to child HIV transmission in Botswana has declined to **Tanzania Operational Plan Report Fy 2013** United States Department of State, 2014-11-12. Since 2004 PEPFAR Tanzania has been working closely with the United Republic of Tanzania and other donors including the Global Fund to Fight AIDS, Tuberculosis and Malaria to respond to the HIV epidemic. PEPFAR Tanzania, GFATM and the URT share a symbiotic relationship in Tanzania. While PEPFAR Tanzania predominantly focuses on

services and system strengthening GFATM is responsible for commodity procurement and some systems strengthening and the URT provides policy framework infrastructure systems and personnel Deficits in resources governance and health systems continue to complicate Tanzania s ability to adequately respond to HIV AIDS As a result Tanzania s health programs especially for HIV are highly dependent upon donor funding Foreign funds account for 97% of the Mainland s HIV AIDS response of which 90% come from the combined efforts of PEPFAR T 74% and the GFATM 16% In addition the country grapples with weak health infrastructure shortages of health and social workers high levels of stigma cumbersome government procurement systems weak management and strategic planning and poor accountability According to the 2011 UNAIDS Report on the Global AIDS Epidemic adult HIV prevalence in the country is estimated at 5 8% and an estimated 1 6 million Tanzanians are living with HIV of which 1 3 million are OVC An estimated 84 000 AIDS related deaths occur in Tanzanian each year According to the 2007 08 Tanzania HIV and AIDS and Malaria Indicator Survey the impact of the epidemic varies significantly by region with the highest prevalence region Iringa estimated at 15 7% and the lowest estimated Zanzibar at 0 6% and with a significant difference in the prevalence between urban 9% and rural 5% areas The data also reveal significant sex differentials in HIV prevalence with male prevalence at 5% and female prevalence at 7% A new THMIS was conducted in 2011 2012 and is due to be released in late March 2013 Despite a generalized epidemic key populations play a critical role in HIV transmission dynamics Data indicate that injection drug use specifically heroin use is on the rise in urban Tanzania and Zanzibar Studies carried out in Dar es Salaam indicate that the HIV prevalence is 42% among people who inject drugs 2007 and 31 4% among sex workers 2010 while unpublished data for men who have sex with men in Dar es Salaam indicates prevalence over 30% 2012 PEPFAR support to Tanzania has enabled a dramatic increase in the number of adults and children accessing ART with 364 000 individuals receiving treatment in FY2012 Also during FY2012 a total of 3 370 000 individuals received HIV testing and counseling 1 100 000 pregnant women were tested and counseled through PMTCT services 526 000 OVC received support and 152 000 VMMC took place

deaths in 2011 the lowest estimate in a long decline since 2000 reflecting the significant expansion of ART The UNAIDS most recent World AIDS Day Report warned of increasing unprotected sex both sexes and multiple partners women The estimated number of people infected with HIV has risen to 1 39 million 55% of whom are female and 14% are children under the age of 15 years HIV is predominantly heterosexually transmitted accounting for 75 80% of new infections However population subgroups show that the most affected and the risk factors and drivers of HIV infections have evolved in recent years Studies show an HIV prevalence of 1 2% in university students 15 40% in fishing communities 37% among sex workers 18% in the partners of sex workers and 13% in the group of men with a history of having sex with men Strikingly 35% of new infections occur amongst self reported monogamous individuals which raises concerns regarding rising multiple concurrent partnerships The remaining transmissions are largely due to mother to child HIV transmission In response to the 2011 UAIS results PEPFAR revised its programmatic and technical approaches and targets to better respond to Uganda s escalating epidemic The 2013 COP is based on scientific evidence prioritized proven interventions resources matched effectively across subpopulations and efforts directed towards sources of new infections to assist the HIV AIDS epidemic response in Uganda The 2013 COP is the product of a consultative process that involved the GOU PEPFAR implementing partners IP and bilateral and multilateral donors

majority of HIV AIDS related activities are donor funded Nevertheless Zimbabwe has not received the magnitude of donor funding that countries with similar HIV burden have been fortunate to access Zimbabwe is facing potential critical shortages of key inputs to achieve ambitious goals particularly in the areas of treatment prevention of mother to child transmission
