

How to Properly Mount the Cutting Blade to the Blade Holder

1

To remove the blade holder from the vibrating head unit, loosen the small screw on top of the blade holder with the included Allen wrench.

Always remove the blade holder BEFORE removing or inserting the buffer tray.

2

Slide the blade holder off the axial bar.

3

Remove the old cutting blade.

Dispose of blade safely into a sharps container.

4

Soak the blade holder in the acetone bath for 5 minutes. Wipe off any residual glue on the blade holder using a paper towel. It is critical to ensure all glue residue is removed before attaching a new blade.

DISCLAIMER: Please only use acetone to clean the blade holder and specimen tube.

Animal Health and Production: Identifying Challenges and Finding a Way Forward Izhar Hyder Qazi,Yangchun Cao ,Jesus R. Requena,2025-11-24 It has been said that the difficulty with predicting the future is that uncertainty seems to increase exponentially with the number years in the future simply because we can t predict technology let alone geopolitical upheavals By the year 2050 our world will grow to 10 billion people and we need to feed them with shrinking resources At the same time we must take into consideration that global warming will have a profound impact on the animal production systems in coming decades if no timely measures are adopted to address this pressing issue These issues desperately need to be addressed and certainly solutions to these pressing problems will be intertwined as we strive to feed a growing population while building sustainable and efficient food systems Clearly health is at the heart of the sustainable animal production systems therefore optimizing the animal health and mitigating the stresses of pathogen and production related diseases is also essential It is now well established that animals are more susceptible to diseases when they are kept under stressful environments Therefore improved animal management systems focusing on disease prevention are essential for optimized production of animals In addition it has been said that over 60% of pathogens that cause human diseases originate from domestic or wild animals therefore protecting the health of animals and the environment protects human health Moreover antimicrobial resistance AMR has been regarded one of the most pressing health issues of the present time and as well as is a growing threat to livelihoods and global food security It is daunting to even imagine a world where there is almost no cure for diseases in humans animals and plants This worst case scenario might turn out to be a reality as pathogenic microbes develop resistance to the antimicrobial arsenals that are used to combat them The societal demand regarding public health zoonoses AMR etc welfare and sustainability i e feed efficiency methane emission is also increasing The good news is that

solutions do exist and the quest for efficient production systems intelligent breeding improved nutrition viable diagnostic methods tailored made biosecurity procedures and integrated health and welfare management is ongoing with the scientific community and industry Fittingly it has been said that all of the world s big problems are multidisciplinary in nature therefore the present day animal scientists and veterinary researchers must break their expertise based cocoons and work in a collaborative manner to sustainably meet the on going and future increasing demand of animal source foods and to ensure good health of animals Finally as we search for quantum leaps in productivity novel and innovative technological solutions need to be put in the practice to achieve these envisaged goals

- 1 Studies focused on sustainable animal production particularly those centred on the principle of clean green and ethical animal management systems
- 2 Disease management including transboundary diseases zoonoses of course and control strategies
- 3 Studies focusing on alternatives to antibiotic use in animal health and production systems and mitigation of AMR threat
- 4 Mechanistic studies focused on the host pathogen interactions
- 5 Practice and the development of novel and classical therapeutics aimed at improving health and production
- 6 Studies using innovative technological and bioinformatic tools to address the pressing issues relevant to animal health and production
- 7 Studies focused on bringing the animal production systems on the path to climate neutrality
