

HEATERS SIZING AND SELECTION OVERVIEW

When temperatures dip below the minimally acceptable ranges for electronics, our electric heaters can raise the temperature inside enclosures to appropriate levels. Heaters are designed to protect sensitive mechanical, electrical and electronic equipment from the harmful effects of condensation and corrosion. Two styles offer heating powers from 10 W to 800 W.

The graph in "Semiconductor Control Panel Heaters (for 10-60 W Heating Applications)" represents a painted-steel enclosure mounted in a calm-air building interior. The lowest temperature differential between room temperature and enclosure interior must be 10 F+ to prevent humidity and condensation. For outdoor applications, double the heating power requirement.

SEMICONDUCTOR CONTROL PANEL HEATERS (FOR 10-60 W HEATING APPLICATIONS)

Step 1:

Plot your application using the graph.

- Find surface area (for example, 4 ft.²) on the vertical scale
- Draw a horizontal line across to the intersection point with the diagonal line representing $\Delta T = 40^\circ\text{F}$
- Extend a vertical line down to the horizontal scale to determine your total heating power required (W = 45 W)

Step 2:

From the total Watts required, subtract the 20 W from pre-existing components to arrive at the minimum heater power of 25 W. The 30 W DSH301 heater should be selected in this case since it is the nearest size that exceeds the requirement.
