*The Discrete Ordered Median Problem: Models and Solution Methods* Patricia Dominguez-Marin, 2013-12-11 This is the first book about the discrete ordered median problem DOMP which unifies many classical and new facility location problems Several exact and heuristic approaches are developed in this book in order to solve the DOMP Audience The book is suitable for researchers in location theory and graduate students in combinatorial optimization **Genetic Algorithms**, 2024-01-17 In this edition of Genetic Algorithms Theory Design and Programming we present a series of scientific contributions that delve into the intricate theoretical foundations and practical nuances of genetic algorithms GAs Beyond the academic realm GAs have demonstrated profound applications in societal decision making and engineering optimization showcased through real world examples and case studies A dedicated section on programming principles offers a thorough guide for implementing GAs across diverse languages This edition tailored for researchers and academics serves as a testament to the scientific advancements within the field inviting readers to explore the nuanced journey from theoretical constructs to pragmatic applications in the dynamic landscape of GAs An Introduction to Genetic Analysis Anthony J.F. Griffiths, 2005 The eighth edition of An Introduction to Genetic Analysis has been extensively revised shaping its coverage to match current research and thinking in genetics Artificial Neural Nets and Genetic Algorithms Rudolf F. Albrecht, Colin R. Reeves, Nigel C. Steele, 2012-12-06 Artificial neural networks and genetic algorithms both are areas of research which have their origins in mathematical models constructed in order to gain understanding of important natural processes By focussing on the process models rather than the processes themselves significant new computational techniques have evolved which have found application in a large number of diverse fields This diversity is reflected in the topics which are the subjects of contributions to this volume There are contributions reporting theoretical developments in the design of neural networks and in the management of their learning In a number of contributions applications to speech recognition tasks control of industrial processes as well as to credit scoring and so on are reflected Regarding genetic algorithms several methodological papers consider how genetic algorithms can be improved using an experimental approach as well as by hybridizing with other useful techniques such as tabu search The closely related area of classifier systems also receives a significant amount of coverage aiming at better ways for their implementation Further while there are many contributions which explore ways in which genetic algorithms can be applied to real problems nearly all involve some understanding of the context in order to apply the genetic algorithm paradigm more successfully That this can indeed be done is evidenced by the range of applications covered in this volume **Pedagogical Seminary and Journal of Genetic Psychology** Granville Stanley Hall, Carl Murchison, 1924 Vols 5 15 include Bibliography of child study By Louis N Wilson Human Heredity Michael R.
