Genetic Algorithms in Applications Rustem Popa,2012-03-21 Genetic Algorithms GAs are one of several techniques in the family of Evolutionary Algorithms algorithms that search for solutions to optimization problems by evolving better and better solutions Genetic Algorithms have been applied in science engineering business and social sciences This book consists of 16 chapters organized into five sections The first section deals with some applications in automatic control the second section contains several applications in scheduling of resources and the third section introduces some applications in electrical and electronics engineering The next section illustrates some examples of character recognition and multi criteria classification and the last one deals with trading systems These evolutionary techniques may be useful to engineers and scientists in various fields of specialization who need some optimization techniques in their work and who may be using Genetic Algorithms in their applications for the first time These applications may be useful to many other people who are getting familiar with the subject of Genetic Algorithms

Steiner Trees in Industry Xiuzhen Cheng,Ding-Zhu Du,2013-12-01 This book is a collection of articles studying various Steiner tree problems with applications in industries such as the design of electronic circuits computer networking telecommunication and perfect phylogeny The Steiner tree problem was initiated in the Euclidean plane Given a set of points in the Euclidean plane the shortest network interconnecting the points in the set is called the Steiner minimum tree The Steiner minimum tree may contain some vertices which are not the given points Those vertices are called Steiner points while the given points are called terminals The shortest network for three terminals was first studied by Fermat 1601 1665 Fermat proposed the problem of finding a point to minimize the total distance from it to three terminals in the Euclidean plane The direct generalization is to find a point to minimize the total distance from it to n terminals which is still called the Fermat problem today The Steiner minimum tree problem is an indirect generalization Schreiber in 1986 found that this generalization i e the Steiner minimum tree was first proposed by Gauss

Fusion of Neural Networks, Fuzzy Systems and Genetic Algorithms Lakhmi C. Jain,N.M. Martin,2020-01-29 Artificial neural networks can mimic the biological information processing mechanism in a very limited sense Fuzzy logic provides a basis for representing uncertain and imprecise knowledge and forms a basis for human reasoning Neural networks display genuine promise in solving problems but a definitive theoretical basis does not yet exist for their design Fusion of Neural Networks Fuzzy Systems and Genetic Algorithms integrates neural net fuzzy system and evolutionary computing in system design that enables its readers to handle complexity offsetting the demerits of one paradigm by the merits of another This book presents specific projects where fusion techniques have been applied The chapters start with the design of a new fuzzy neural controller Remaining chapters discuss the application of expert systems neural networks fuzzy control and evolutionary computing techniques in modern engineering systems These specific applications include direct frequency converters electro hydraulic systems motor control toaster control speech recognition vehicle routing fault diagnosis Asynchronous Transfer
