Parker, 1994 This edition reflects the latest results of research sponsored by the American Society of Heating Refrigerating and Air Conditioning Engineers ASHRAE and the continued development of ASHRAE standards regarding indoor air quality comfort and refrigerants The chapter on air conditioning systems has been revised increased emphasis has been placed on control of HVAC systems by adding more explanation of control theory and more detailed illustrations of typical systems and control Data and references have been completely updated Existing problems have been revised and new ones added **HVAC Cooling Load - Calculations and Principles** A. Bhatia, 2014-10-16 Heating and cooling load calculations are carried out to estimate the required capacity of heating and cooling systems which can maintain the required conditions in the conditioned space To estimate the required

cooling or heating capacities one has to have information regarding the design indoor and outdoor conditions specifications of the building specifications of the conditioned space such as the occupancy activity level various appliances and equipment used etc and any special requirements of the particular application For comfort applications the required indoor conditions are fixed by the criterion of thermal comfort while for industrial or commercial applications the required indoor conditions are fixed by the particular processes being performed or the products being stored Generally heating and cooling load calculations involve a systematic and stepwise procedure which account for all the building energy flows In practice a variety of methods ranging from simple rules of thumb to complex transfer function methods are used to arrive at the building loads This short quick book provides a procedure for preparing a manual calculation for cooling load using CLTD CLF method suggested by ASHRAE and includes two detailed examples For more advanced methods such as TFM the reader should refer to ASHRAE and other handbooks
