Rasinski,1993 This study of high school sophomores in 1980 and 1990 compares the experiences of students in the two cohorts identifying changes in in school and out of school activities academic achievement self concept values plans and aspirations Similarities and differences between the two groups are documented using data from the National Education Longitudinal Study of 1988 NELS 88 and High School and Beyond HS 2 patterns of extracurricular participation changed especially in musical activities 31% in 1980 to 22% in 1990 and in hobby clubs 21% in 1980 to 7% in 1990 3 changes in sophomores giving high importance to particular life values e g marriage and family 83% rating this as very important in 1980 72% in 1990 4 small but statistically significant increase in the number of females aspiring to traditionally male

dominated non professional occupations 15 6% in 1980 versus 18 % in 1990 Sixteen tables and 13 figures present data from the 2 studies Three appendixes contain information about the survey sample sizes standard errors and other methodological and technical information Appendix A contains an additional 20 data tables Contains 46 references SLD

Practical Tools for Designing and Weighting Survey Samples Richard Valliant,Jill A. Dever,Frauke Kreuter,2013-05-16 Survey sampling is fundamentally an applied field The goal in this book is to put an array of tools at the fingertips of practitioners by explaining approaches long used by survey statisticians illustrating how existing software can be used to solve survey problems and developing some specialized software where needed This book serves at least three audiences 1 Students seeking a more in depth understanding of applied sampling either through a second semester long course or by way of a supplementary reference 2 Survey statisticians searching for practical guidance on how to apply concepts learned in theoretical or applied sampling courses and 3 Social scientists and other survey practitioners who desire insight into the statistical thinking and

steps taken to design select and weight random survey samples Several survey data sets are used to illustrate how to design samples to make estimates from complex surveys for use in optimizing the sample allocation and to calculate weights Realistic survey projects are used to demonstrate the challenges and provide a context for the solutions The book covers several topics that either are not included or are dealt with in a limited way in other texts These areas include sample size computations for multistage designs power calculations related to surveys mathematical programming for sample allocation in a multi criteria optimization setting nuts and bolts of area probability sampling multiphase designs quality control of survey operations and statistical software for survey sampling and estimation An associated R package PracTools contains a number of specialized functions for sample size and other calculations The data sets used in the book are also available in PracTools so that the reader may replicate the examples or perform further analyses
