Hands On Water and Wastewater Equipment Maintenance
Barbara Renner, 1998-10-02
Hands On Maintenance for Water and Wastewater Equipment deals with equipment maintenance as individual components not as complete machines. This allows more information about the design, application and maintenance requirements of machinery to be presented. The text covers basic operating characteristics of machinery components, making it a valuable reference source as well as a training and maintenance manual. Written in easy to understand language without complex formulas or technical theories, this text provides you with basic information to help you acquire a general understanding of how components function and how to keep equipment operating properly.

Maintenance Scheduling in Restructured Power Systems
M. Shahidehpour, M. Marwali, 2012-12-06
The overall goal of this book is to introduce algorithms for improving the economic posture of a utility company in a restructured power system by promoting cost effective maintenance schedules. Today, cutting operations and maintenance (O&M) costs and preserving service reliability are among the top priorities for managers of utility companies. Preventive maintenance is perhaps the single largest controllable cost of a utility's operation. It is perceived that a careful planning and a good coordination among self interested entities in a restructured power system are essential to achieving an optimal trade off between the cost of maintenance and the service reliability. Traditional maintenance programs in vertically integrated utilities relied heavily on time directed maintenance and manufacturer recommendations. This book offers a logical alternative to traditional electric utility maintenance practices and a basis for maintenance decisions. The book is organized as follows: Chapter I reviews various issues related to the power system operation and presents the role of restructuring in maintenance scheduling. In Chapter II, fundamental topics related to linear and nonlinear systems are reviewed. The duality in linear programming is discussed and integer programming is reviewed. Benders decomposition, Lagrangian relaxation and Dantzig Wolfe decomposition are presented. Several examples are given to demonstrate the applications of different methods. The formulation of reactive power optimization is discussed, which will be used again in Chapter VII.
