Introduction

Executive summaries of evidence synthesis reports often use tables to summarize the results. However, the table format is not standardized and it is unclear which format most effectively summarizes which type of data. The type of synthesis (meta-analysis versus narrative review) as well as the type of outcome (dichotomous versus continuous) may dictate the table format that allows users to discern the results most clearly. We analyzed the representation of elements of Cochrane Summary of Findings tables in summary tables in EPC report executive summaries.

Cochrane template

The Cochrane Handbook advises authors to present evidence in a Summary of Findings table.¹ The table template has been part of the Cochrane Handbook since 2008.² The table format aims to provide a concise and transparent summary of the key findings of a review.³ This format, which was developed and end-user tested in clinical audiences, was primarily developed to allow health professionals “rapid retrieval of key information.”^{4,5}

The general template for Cochrane Summary of Findings tables for interventions includes the following:

1. A list of all important outcomes, both desirable and undesirable
2. A measure of the typical burden of these outcomes (e.g. illustrative risk, or illustrative mean, on control intervention)
3. Absolute and relative magnitude of effect (if both are appropriate)
4. Numbers of participants and studies addressing the outcomes
5. A grade of the overall quality of the body of evidence for each outcome (which may vary by outcome)
6. Space for comments

An example is listed in the appendix (Appendix A). Of note, for reports where statistical pooling is not possible, the results column for a given outcome will state “See comment,” and the results or more details are given in the “Comments” field. This format is designed for dichotomous outcomes, and additional published guidance is available for this outcome type, such as presenting absolute effects as natural frequencies (e.g., events per 10,000 patients) or how to deal with analytic approaches that yield different results.⁶ There are also suggested options for continuous outcomes, ranging from presenting standardized mean differences to converting to
