

Questions to ask yourself to prepare for the DBA and module exam

1. What is the relationship between radius and diameter – radius is half of diameter and diameter is two times radius

2. What is the relationship between an inscribed angle and the arc it intercepts- The Inscribed Angle Theorem states that the measure of an inscribed angle is half the measure of its intercepted arc.

3. how do you find circumference and area of a circle- Use the formulas to calculate the circumference and area: $c = 2\pi r$ and $A = \pi r^2$

4. how are arc length and sector area found- Arc length can be determined using the formula $2\pi r (x/360)$ where x is the measure of the central angle.

Area of a sector can be determined using the formula $A = \pi r^2 (x/360)$ where x is the measure of the central angle

5. what is the inscribed angle theorem- A quadrilateral ABCD can be inscribed in a circle if and only if a pair of opposite angles is supplementary.

6. what is the equation of a circle - $(x - h)^2 + (y - k)^2 = r^2$, where (h, k) represents the location of the circle's center, and r represents the length of its radius

7. how do you determine the center and radius from an equation of a circle- change it to standard form and complete the square.

Example: $x^2 + y^2 + 24x + 10y + 160 = 0$ || $(x^2 + 24x) + (y^2 + 10y) = -160$

|| Completing the square requires us to take the coefficient on the first degree terms, divide them by 2, and then square the result before adding the result back to both sides. ||

Hopf Algebras and Generalizations Louis H. Kauffman, David E. Radford, Fernando José Oliveira Souza, 2007 Hopf algebras have proved to be very interesting structures with deep connections to various areas of mathematics, particularly through quantum groups. Indeed, the study of Hopf algebras, their representations, their generalizations, and the categories related to all these objects has an interdisciplinary nature. It finds methods, relationships, motivations, and applications throughout algebra, category theory, topology, geometry, quantum field theory, quantum gravity, and also combinatorics, logic, and theoretical computer science. This volume portrays the vitality of contemporary research in Hopf algebras. Altogether, the articles in the volume explore essential aspects of Hopf algebras and some of their best known generalizations by means of a variety of approaches and perspectives. They make use of quite different techniques that are already consolidated in the area of quantum algebra. This volume demonstrates the diversity and richness of its subject. Most of its papers introduce the reader to their respective contexts and structures through very expository preliminary sections.
