Pendarvis, John L. Crawley, 2019-02-01 Exploring Biology in the Laboratory Core Concepts is a comprehensive manual appropriate for introductory biology lab courses This edition is designed for courses populated by nonmajors or for majors courses where abbreviated coverage is desired Based on the two semester version of Exploring Biology in the Laboratory 3e this Core Concepts edition features a streamlined set of clearly written activities with abbreviated coverage of the biodiversity of life These exercises emphasize the unity of all living things and the evolutionary forces that have resulted in and continue to act on the diversity that we see around us today [Laboratory Directions for General Biology; the Frog. Zoological Half \(second Semester\)](#) University of Michigan, 1910 **EdPsych Modules** Cheryl Cisero Durwin, Marla Reese-Weber, 2019-12-04 EdPsych Modules uses an innovative modular approach and case studies based on real life classroom situations to address the challenge of effectively connecting theory and research to practice Succinct stand alone modules are organized into themed units and offer instructors the flexibility to tailor the book's contents to the needs of their course The units begin with a set of case studies written for early childhood elementary middle and secondary classrooms providing students with direct insight into the dynamics influencing the future students they plan to teach All 25 modules highlight diversity emphasizing how psychological factors adapt and change based on external influences such as sex gender race language disability status and socioeconomic background The Fourth Edition includes over three hundred new references across all 25 modules and expanded coverage of diversity in new diversity related research This title is accompanied by a complete teaching and learning package **Tacit Dimensions of Pedagogy** Bosse Bergstedt, Anna Herbert, Anja Kraus, Christoph Wulf, 2012 There is a controversy regarding the relationship between theory and praxis in the field of pedagogy with no final decision on how to model it From our perspective theories concerning educational science are especially promising if they face the challenges associated with diverse educational practices and their special circumstances As the central task we consider the development of a notion of the explicit as well as of the tacit side of practices and of the necessity to reflect these two Looking at educational practices is not reduced to the explicit decisions concerning aims subjects schedules social settings etc in the diverse pedagogical fields It also entails the examination of the inexplicable knowledge on which social relations are based Aesthetical dimensions of education like sensual perceptions and time space object relations then are important frames of the practical orientation Furthermore corporal dispositions and influences of non formal learning on formal learning situations are explored The incidental scenery formed by these tacit factors might open and broaden or it might also close and restrict the significant ways of teaching and learning it might empower learners and teachers in understanding transcending and creating the world or constrain them in
