Advanced Supply Management Strategy and Execution makes the tie between competitive survival and supply chain leadership maturity of process and associated results. It clearly defines how to achieve and maintain a supply chain leadership position by focusing on real world execution and detailed integration of specific actions and process techniques. These distinguished experts and accomplished authors have gathered the nuggets of success from many international firms and combined them into a winning formula not available in other books that has been achieved by the select few. This unique how to guide brings the opportunity within the sub processes of procurement and supply management into focus and includes both the hard side and soft side of the continuous process transformation. The real world concepts deployment examples and illustrations are practical and explained with precision for ease of understanding and are tailored for application to any business environment. This no fluff book will put money in your company coffers. In most companies the effort to improve supply chain results has been short lived incomplete or sub optimized. The most common reason is the lack of a clear understanding of what they really need to do specifically line of sight linkage of the enterprise in the transformation process efforts to customers and shareholders. The Transformation of the Agrifood System in Central and Eastern Europe and the New Independent States

Jill E. Hobbs, William Alexander Kerr, James D. Gaisford, 1997 This book offers a coherent perspective on the transition to a market based agri food system in the Central and Eastern European Countries and the New Independent States of the former Soviet Union. It provides a formal analysis of the entire food chain from farm inputs to final consumers including imports and exports. Major components of the agribusiness sector inputs, farm level marketing, processing, distribution and retailing are all dealt with in separate chapters. In addition, there is coverage of food security, multinationals, commercial law, finance and building market institutions. Theoretical chapters are devoted to problems concerning prices, transactions, costs and bilateral monopoly. This theoretical discussion gives an in depth discussion of the difficulties underlying the process of transition to a market based agri food system and forms a consistent focus for the book as a whole. Overall, the book makes a highly original contribution to the literature on this topical subject and will be indispensable for agricultural and food economists as well as general economists and others interested in the topic of economies in transition.
