Mph Python 3 Operators Manual:

Computational Methods and GIS Applications in Social Science - Lab Manual Lingbo Liu,Fahui Wang,2023-10-25

This lab manual is a companion to the third edition of the textbook Computational Methods and GIS Applications in Social Science. It uses the open source platform KNIME to illustrate a step by step implementation of each case study in the book. KNIME is a workflow based platform supporting visual programming and multiple scripting language such as R Python and Java. The intuitive structural workflow not only helps students better understand the methodology of each case study in the book but also enables them to easily replicate, transplant and expand the workflow for further exploration with new data or models. This lab manual could also be used as a GIS automation reference for advanced users in spatial analysis.

FEATURES

The first hands on open source KNIME lab manual written in tutorial style and focused on GIS applications in social science. Includes 22 case studies from the United States and China that parallel the methods developed in the textbook. Provides clear step by step explanations on how to use the open source platform KNIME to understand basic and advanced analytical methods through real life case studies. Enables readers to easily replicate and expand their work with new data and models. A valuable guide for students and practitioners worldwide engaged in efforts to develop GIS automation in spatial analysis. This lab manual is intended for upper level undergraduate and graduate students taking courses in quantitative geography, spatial analysis, GIS applications in socioeconomic studies, GIS applications in business and location theory as well as researchers in the similar fields of geography, city and regional planning, sociology and public administration.

Towards Bayesian Model-Based Demography Jakub Bijak,2021-12-09

This open access book presents a ground breaking approach to developing micro foundations for demography and migration studies It offers a unique and novel methodology for creating empirically grounded agent based models of international migration one of the most uncertain population processes and a top priority policy area The book discusses in detail the process of building a simulation model of migration based on a population of intelligent cognitive agents their networks and institutions all interacting with one another The proposed model based approach integrates behavioural and social theory with formal modelling by embedding the interdisciplinary modelling process within a wider inductive framework based on the Bayesian statistical reasoning Principles of uncertainty quantification are used to devise innovative computer based simulations and to learn about modelling the simulated individuals and the way they make decisions The identified knowledge gaps are subsequently filled with information from dedicated laboratory experiments on cognitive aspects of human decision making under uncertainty In this way the models are built iteratively from the bottom up filling an important epistemological gap in migration studies and social sciences more broadly
