Leibrecht,2003 This document provides two products developed to support performance feedback regarding unit employment of the platform based digital command control and communication system known as Force XXI Battle Command Brigade and Below FBCB2 The Leader s Primer for Exploiting FBCB2 describes twenty two major FBCB2 capabilities the tactical significance of each capability the digital operator and user tasks involved in employing each capability the probability that the capability is being exploited and the evidence that the capability is not being exploited The FBCB2 Exploitation Tool identifies fifty digital

performance goals and the tactical significance of each goal. The tool identifies the echelons to which each goal applies the trigger events that call for observation of unit performance relevant to the goal and guidance regarding where to obtain the data needed to assess unit performance. Data are obtained by using one or more of the following mechanisms: observing information on an FBCB2 system, viewing breakouts of message traffic, viewing breakouts of user interactions with systems and asking questions of warfighters. DTIC *The Army Communicator*, 2003 **Techniques and Practices in the Training of Digital Operator Skills** Bruce C. Leibrecht, 2007 This report presents research on classroom training practices in Army Battle Command System courses. The investigation examined a sample of institutional courses using observation and classification techniques. Three learning theories (behaviorist, cognitive, and constructivist) guided the collection and analysis of data. Cognitive and behaviorist training techniques were observed somewhat more frequently than constructivist techniques. The frequency of training techniques depended on the type of course operator vs. leader orientation, instructor style and progression across days. The discussion offers potential improvements in the areas of training techniques, program of instruction, training environment and instructional innovation. The report is intended for use by training designers and developers, digital trainers and training managers working in institutional settings. P i *To Fight Or Not to Fight?* Robert S. Cameron, 2010 Providing a narrative analysis of US Army reconnaissance, scout and cavalry evolution from the post World War I era through the Iraqi conflict, this book outlines key developments in the concepts governing reconnaissance units from the armored cavalry regiment down to the maneuver battalion, scout platoon. The trend analysis included in these pages shows how mounted reconnaissance arrived at its current state. The author provides a clear depiction of past evolution to guide future reconnaissance development. Command and General Staff College Combined Arms Center website **Jane's International Defense Review**, 2001-10 *Digitization of the Battlespace*, 1999 **Training Analysis and Feedback Aids (TAAF Aids) Study for Live Training Support** Bill R. Brown, 1998 Maneuver Combat Training Center CTC and home station requirements for exercise control and training feedback are intensive. With the advent of battlefield digitization, tactical decision aids, smart, intelligent and brilliant munitions, advances in non-lethal weapons and new reconnaissance, surveillance and target acquisition (RSTA) systems, the workload for trainers continues to spiral. Force modernization is creating new control and feedback tasks that have the potential to rob trainers of time they would otherwise spend observing, coaching and facilitating the learning of exercise players. This study: 1. Identifies the impact of force modernization on future exercise control and training feedback functions; 2. Identifies tasks involved in after action review (AAR) preparation, observer controller, OC coordination and mentoring, and take home package construction; 3. Provides strategies to reduce OC and Training Analysis Facility (TAF) workload; 4. Identifies payoffs in task reduction achieved by each strategy; 5. Does not provide technical solutions or analysis of task criticality, complexity, duration or frequency for trainer tasks.
