*Designing Embedded Hardware* John Catsoulis, 2005-05-16 *Designing Embedded Hardware* steers a course between those books dedicated to writing code for particular microprocessors and those that stress the philosophy of embedded system design without providing any practical information Having designed 40 embedded computer systems of his own author John Catsoulis brings a wealth of real world experience to show readers how to design and create entirely new embedded devices and computerized gadgets as well as how to customize and extend off the shelf systems [Practical Industrial Data Networks](#) Steve Mackay, 2004-04-19 There are many data communications titles covering design installation etc but almost none that specifically focus on industrial networks which are an essential part of the day to day work of industrial control systems engineers and the main focus of an increasingly large group of network specialists The focus of this book makes it uniquely relevant to control engineers and network designers working in this area The industrial application of networking is explored in terms of design installation and troubleshooting building the skills required to identify prevent and fix common industrial data communications problems both at the design stage and in the maintenance phase The focus of this book is outside the box The emphasis goes beyond typical communications issues and theory to provide the necessary toolkit of knowledge to solve industrial communications problems covering RS 232 RS 485 Modbus Fieldbus DeviceNet Ethernet and TCP IP The idea of the book is that in reading it you should be able to walk onto your plant or facility and troubleshoot and fix communications problems as quickly as possible This book is the only title that addresses the nuts and bolts issues involved in design installation and troubleshooting that are the day to day concern of engineers and network specialists working in industry Provides a unique focus on the industrial application of data networks Emphasis goes beyond typical communications issues and theory to provide the necessary toolkit of knowledge to solve industrial communications problems Provides the tools to allow engineers in various plants or facilities to troubleshoot and fix communications problems as quickly as possible **Handbook for Sound Engineers** Glen Ballou, 2013-05-02 *Handbook for Sound Engineers* is the most comprehensive reference available for audio engineers All audio topics are explored if you work on anything related to audio you should not be without this book The 4th edition of this trusted reference has been updated to reflect changes in the industry since the publication of the 3rd edition in 2002 including new technologies like software based recording systems such as Pro Tools and Sound Forge digital recording using MP3 wave files and others mobile audio devices such as iPods and MP3 players Over 40 topics are covered and written by many of the top professionals for their area in the field including Glen Ballou on interpretation systems intercoms assistive listening and image projection Ken Pohlmann on compact discs and DVDs David Miles Huber on MIDI Dr Eugene Patronis on amplifier design and outdoor sound systems Bill Whitlock on audio transformers and preamplifiers Pat Brown on fundamentals and gain structures Ray Rayburn on virtual systems and digital interfacing and Dr Wolfgang Ahnert on computer aided sound system design and acoustics for concert halls [Home](#)
