 sentence second as a word equation and finally in its traditional symbolic form In this way students can focus on the meaning  
 rather than the abstraction of the mathematics An appendix on English and SI units is also included Science by the Numbers  
 To help students understand the importance of simple mathematical calculations in areas of magnitude several nontraditional  
 calculations have been incorporated For example how much solid waste is generated in the United States how long it would  
 take to erode a mountain and how many people were required to build Stonehenge Great Ideas and Great Ideas Concept  
 Each chapter begins with a statement of a great unifying idea or theme in science and a concept map so that students  
 immediately grasp the chief concept of the chapter and how the idea relates to the different branches of science These  
 statements are intended to provide a framework for placing everyday experiences into a broad context Stop and Think  
 Questions challenge students to think critically about the implications of a scientific discovery or principle Resources for
