### PARTICLE THEORY AND STATES OF MATTER

What is the theory of particles? Understanding the nature of matter and the arrangement of particles is the basis of the particle theory of matter. The particle theory of matter explains the states of matter and the changes between them. It also explains the properties of matter and the changes between them.

**States of Matter** Matter can exist in three primary states: solid, liquid, and gas. Each state has different properties. Solids have a fixed shape and volume. Liquids have a fixed volume but no fixed shape. Gases have no fixed shape or volume. The particles in each state are arranged differently. In solids, particles are packed closely together. In liquids, they are more spread out. In gases, they are very far apart.

**Changes of State** Matter can change from one state to another. These changes are called changes of state. They are caused by heating or cooling. For example, ice melts to form water when heated. Water boils to form steam when heated. Steam condenses to form water when cooled. These changes are reversible.

**Particle Theory** The particle theory of matter explains the changes of state. In solids, particles are packed closely together. When heated, they gain energy and move more. They eventually break free of their fixed positions and move around. This is how a solid melts to become a liquid. In liquids, particles are more spread out. When heated, they gain more energy and move even more. They eventually break free of their fixed positions and move around. This is how a liquid boils to become a gas.

**10** Complete the diagram to show the arrangement of the particles in each state of matter. Label the diagram with the name of the state of matter.

**9** What is the change of state called when a solid becomes a liquid?

**8** What property of matter is different between the three states of matter?

**7** How do you know that matter is made of particles?
