At Jabsco we are the world's largest manufacturers and suppliers of small craft marine toilets – so we've built a fair degree of experience in heads systems and their design and installation.

Far and away the most widely used marine toilets are manually operated. Our 29090/29120 series have been the most popular type worldwide over the last ten years. We have now improved them even further with stronger materials, new styling and new features that make them even easier to service and maintain. With modern design and materials manual toilets are easy to install and service, simple and clean to use and offer exceptional value for money. Remember there are two bowl sizes to choose from, and normally even the smallest boats have enough space for the comfort of a full size bowl (29120 series) for just a little extra cost.

Our luxury range of Quiet Flush, Designer Style and Deluxe Flush electric toilets feature low noise levels, so sleeping guests will not be disturbed when the toilet is used! There are options of either flushing with fresh water from the boats own supply or with salt, river or lake water from outside the boat. DF and DS Series toilets have domestic style bowls with all pump components hidden from view. Quiet Flush toilets have the pump at the rear of a narrow base and so can be installed in more narrow spaces. Three way controls allow water level to be increased or decreased.

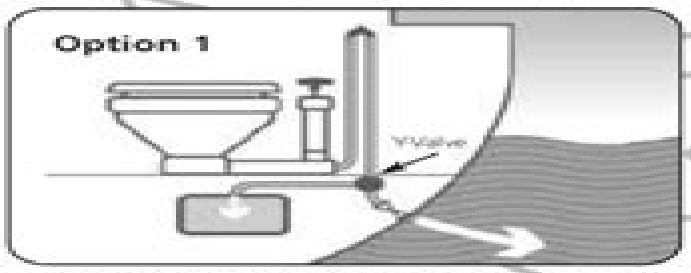
Quiet Flush Conversion kits allow owners of 37010 and many other types of electric or manual toilets to upgrade to full Quiet Flush specification. All our electric toilets use surprisingly little power, and are simple to operate for newcomer and experienced crews alike.

Manual toilets can be upgraded to electric operation by the use of the 29200 Series Conversion. This has been designed to bolt directly in place of the manual pump and use the same plumbing as previously installed. There are two major advantages to this design – it makes the operation of electric toilets simple for boat owners and boatbuilders alike, while still offering the option of a quick return to manual operation in the event of a power failure.

Our 29200 Series Conversion kits are designed with economy of power in mind, driving two pumps from a single motor, and with their rapid bowl emptying a normal crew of four can expect to use less than one amp/hour a day through toilet use.

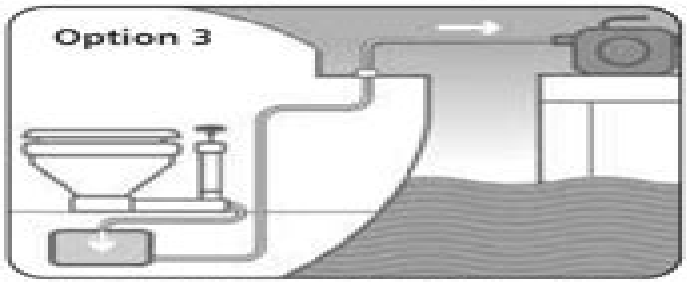
All our toilets can be used on inland waterways, rivers, lakes or the sea, and can be installed above or below the waterline. However, attention must be paid to installation instructions for safety and installations must meet with local regulations concerning overboard discharge. All our toilets are designed as discharge overboard or into holding tanks as necessary.

We at Jabsco all understand the importance of keeping the environment clean and free from waste. However it is unfortunate that there is no internationally accepted legislation to guide us on how to deal with the waste from our toilet systems. For this reason Jabsco have produced this guide which details the four most common ways of dealing with toilet waste. It is important to note that your choice of system may be governed by your own national and local rules and regulations.

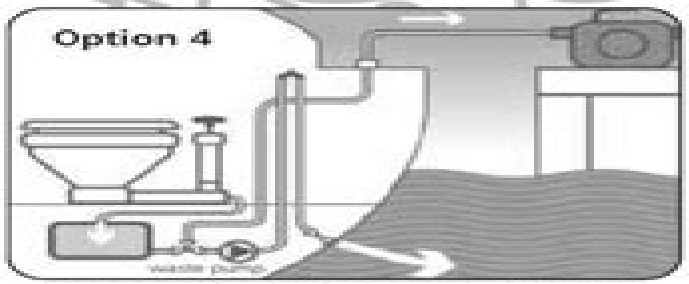


Discharge waste through a Y-valve directly into a non-restricted area or to a holding tank when within the three mile limit using the toilet's own pump and an anti-syphon loop.

Collect waste in an on-board holding tank so that it can be discharged later when you are in un-restricted waters using an electric or manual pump.



Collect waste in an on-board holding tank for discharge later to a Shore Station using a dockside suction pump or portable utility pump.



A combination of Option 2 and 3 to give you the flexibility of discharging waste whenever most convenient and without the need for shore side connection.
