Design of Modern Communication Networks

Christofer Larsson, 2014-03-05 Design of Modern Communication Networks focuses on methods and algorithms related to the design of communication networks using optimization graph theory probability theory and simulation techniques The book discusses the nature and complexity of the network design process then introduces theoretical concepts problems and solutions It demonstrates the design of network topology and traditional loss networks followed by uncontrolled packet networks flow controlled networks and multiservice networks Access network design is reviewed and the book concludes by considering the design of survivable reliable networks and various reliability concepts A toolbox of algorithms The book provides practical advice on implementing algorithms including the programming aspects of combinatorial algorithms Extensive solved problems and illustrations Wherever possible different solution methods are applied to the same examples to compare performance and verify precision and applicability Technology independent Solutions are applicable to a wide range of network design problems without relying on particular technologies

Comprehensive Functional Verification

Bruce Wile, John Goss, Wolfgang Roesner, 2005-05-26 A key strength of this book is that it describes the entire verification cycle and details each stage The organization of the book follows the cycle demonstrating how functional verification engages all aspects of the overall design effort and how individual cycle stages relate to the larger design process Throughout the text the authors leverage their 35 plus years experience in functional verification providing examples and case studies and focusing on the skills methods and tools needed to complete each verification task Additionally the major vendors Mentor Graphics Cadence Design Systems Verisity and Synopsys have implemented key examples from the text and made these available on line so that the reader can test out the methods described in the text
