*The New Yorker*, 2001      **Stem Cells Handbook** Stewart Sell, 2003-10-22 The power of stem cells for tissue development regeneration and renewal has been well known by embryologists and developmental biologists for many years Those presently active in research in the stem cell field owe much to previous work by embryologists and cancer researchers for their insights into what stem cells can do In the last 4 5 years the rapid expansion of the concept of adult tissue stem cells as pluripotent progenitors for various tissues has led to an even greater appreciation of the power of stem cells The demonstration that both embryonic and adult tissue stem cells have the ability to produce progenitor cells for tissue renewal has opened vast possibilities for treatment of congenital deficiency diseases as well as for regeneration of damaged tissues Older concepts of determination leading to loss of potential during differentiation of adult tissues are being replaced by newer ideas that cells with multiple potential exist in different forms in various adult organs and that cells thought to be restricted to differentiation to one cell type may be able to transdifferentiate into other tissue cell types Thus the concept of embryonic rests in adult tissues hypothesized to be the cellular origin of cancer by Durante and Conheim in the 1870s now can be expanded to include survival of pluripotential embryonic like stem cells in adult tissues      **The Lower Brainstem and Bodily Homeostasis** William W. Blessing, 1997 The book deals with the neural integration of behavioral and physiological aspects of bodily homeostasis viewed from the standpoint of the lower brainstem particularly the medulla oblongata An historical framework is maintained Functions covered include breathing regulation of arterial pressure and blood flow to the tissues arousal and nociception and eating and metabolism A concluding chapter devoted to the human includes an anatomical atlas of the human lower brainstem Emphasis is placed on anatomically established neural circuitry rather than on poorly characterized functional centers e g vasomotor centers Similarly conventionally recognized neural systems including the limbic system the reticular formation and the autonomic nervous system are shown to be unhelpful as explanatory concepts The autonomic nervous system for example comprises afferent and efferent neurons which connect the brain with the various cardiovascular and visceral structures It does not function in its own right Patterns of autonomic discharge originate in the brain The book stresses the role of the visceral information that reaches the brainstem via afferent components of the lower cranial nerves including the vagus Homeostatic functions involve changes in behavior as well as changes in internal physiological functions an integration achieved by the nervous system functioning as a whole      *Science Citation Index*, 1993 Vols for 1964 have guides and journal lists      *Understanding Craniofacial Anomalies* Mark P.
