Automation in Agriculture Stephan Hussmann, 2018-03-14 According to Prof D Despommier by the year 2050 nearly 80% of the earth's population will reside in urban centers. Furthermore the human population will increase by about 3 billion people during the interim. New land will be needed to grow enough food to feed them. At present throughout the world over 80% of the land that is suitable for raising crops is in use. What can be done to avoid this impending disaster? One possible solution is indoor farming. However not all crops can easily be moved in an indoor environment. Nevertheless to secure the food supply it is necessary to increase the automation level in agriculture significantly. This book intends to provide the reader with a comprehensive overview of the impact of the Fourth Industrial Revolution and automation examples in agriculture.
