Transforming Energy Anthony Patt, 2015-07-16 Climate change will be an ecological and humanitarian catastrophe unless we move quickly to eliminate greenhouse gas emissions Policy experts advise us that we need to make major changes to our lifestyles and our governments need to agree globally binding treaties and implement market instruments like carbon taxes This advice is a mistake it treats technological innovation as being at the periphery of the climate policy challenge whereas it needs to be at its core we will phase out emissions when and only when the technologies to replace fossil fuels are good enough and policies need quickly to support these new technologies directly Anyone with an interest in climate change and energy policy will find this book forward thinking and invaluable Professional policy makers climate and energy policy researchers and students of energy and public policy economics political science environmental studies and geography will find this book especially stimulating **Annual Report** South Africa.
