Design for a Sustainable Circular Economy Gavin Brett Melles, Christian Wölfel, 2023-12-29 This multi authored book aims to illustrate the social economic and ecological factors that should determine and be determined by design in the implementation of a sustainable circular economy and society We take design to refer to a continuum of perspectives and applications from industrial design to policy design and this broad perspective invites theoretical and methodological contributions from a range of fields In addition to bringing scholarly diversity to circularity we expand and challenge the mainstream circular economy narrative of material efficiencies and green growth to include the demands of inclusive growth and ecological boundaries consistent with sustainable development Readers from within and beyond design conscious of the limitations of circular green growth will find new inspiration in this book regarding the nature of a sustainable circular economy and society and the broad design agenda that must be implemented to enable a just and informed circular transition

Functional Linear Algebra Hannah Robbins,2021-04-06 Linear algebra is an extremely versatile and useful subject It rewards those who study it with powerful computational tools lessons about how mathematical theory is built examples for later study in other classes and much more Functional Linear Algebra is a unique text written to address the need for a one term linear algebra course where students have taken only calculus It does not assume students have had a proofs course The text offers the following approaches More emphasis is placed on the idea of a linear function which is used to motivate the study of matrices and their operations This should seem natural to students after the central role of functions in calculus Row reduction is moved further back in the semester and vector spaces are moved earlier to avoid an artificial feeling of

separation between the computational and theoretical aspects of the course Chapter 0 offers applications from engineering and the sciences to motivate students by revealing how linear algebra is used Vector spaces are developed over \mathbb{R} but complex vector spaces are discussed in Appendix A 1 Computational techniques are discussed both by hand and using technology A brief introduction to Mathematica is provided in Appendix A 2 As readers work through this book it is important to understand the basic ideas definitions and computational skills Plenty of examples and problems are provided to make sure readers can practice until the material is thoroughly grasped Author Dr Hannah Robbins is an associate professor of mathematics at Roanoke College Salem VA Formerly a commutative algebraist she now studies applications of linear algebra and assesses teaching practices in calculus Outside the office she enjoys hiking and playing bluegrass bass
